

traderPlus⁺

Bridging the gap between your financial trading platforms and your underlying treasury systems in an unprecedented fashion. TraderPlus allows you to centrally control and monitor the end-to-end process of your trade execution and confirmation and matching activities.

With the TraderPlus straight-through-processing capabilities you will never lose sight of your trades, as they transition through the stages of your trade execution and confirmation process, across platforms and treasury systems.

TRADING PLATFORM AGNOSTIC

Supports concurrent straight through processing to multiple trading platforms, such as FXAll (Refinitiv) and FXGO (Bloomberg), exchanges, banks or even multiple accounts on the same platform.

COMPLETELY AUTOMATED STRAIGHT-THROUGH-PROCESSING

Never lose sight of your trades, as they transition from your order management system to the trading platform, become unconfirmed trades in your Treasury Management System (TMS), go through matching and confirmation and finally are confirmed in your TMS.

OUT-OF-THE-BOX INTEGRATION TO SAP

Ready to use integration to TMS applications including SAP Trading Platform Integration, SAP ECC and SAP S/4 HANA TRM, other Order and Treasury Management Systems.

CONFIRMATION, SETTLEMENT AND MATCHING

From a single place, control, automate and monitor the progress of your trade execution and matching-confirmation process.

FLEXIBLE CONFIGURATION

Configurable flow-based trade execution process, supporting approvals, notifications, data enrichment, custom fields and custom integration mapping.

360-DEGREE AUDIT

Complete audit trail of trading activities, configuration changes and integration logs.
