CHALLENGES WITH TRADING PLATFORM INTEGRATION

ISSUES WITH LEGACY SOLUTIONS

- Legacy solutions are cumbersome, often custom solutions, that create unstable integration processes.
- As a result, the order and trade execution integration has often technical issues, and requires a high degree of maintenance.
- This creates inflexible solutions, that are hard to change and adjust to the changing requirements and challenges of today's financial markets.
- Legacy solutions are based on old technology unable to take advantage of technological advances such as AI, in-memory computing, cloud.

SOLUTION: Standard App with End2End STP

- Third party off the shelf solution. No custom code.
- SaaS Subscription. Third party managed. Low maintenance.
- 100% configurable. Trading platform agnostic.
- Cloud app. No hardware cost. High scalability, availability, redundancy. AI & ML ready.

Brisken co-innovation with SAP

BRISKEN TRADER PLUS+

Completely automated straight-through-processing of trade execution for SAP Treasury through FXall, Bloomberg FXGO, other platforms and banking portals.

Trading Platform Agnostic

Supports concurrent straight through processing to multiple trading platforms, such as Refinitiv FXAll and Bloomberg FXGO, exchanges, banks or even multiple accounts on the same platform.

Out-of-the-box Integration to SAP
